

HANGING HISPANIOLAN SPINDALIS SUNCATCHER

The male Hispaniolan Spindalis is a striking bird with colors of black, white, chestnut, yellow and orange! But who says you have to travel to the wet montane forests of Hispaniola so see these beautiful colors? In this activity you'll make a suncatcher- a decoration that catches rays of sunlight and casts them as rainbow hued patterns across the room.

Here is a list of materials you will need:

- empty clear plastic milk jug, washed and dried
- permanent markers
- scissors
- utility Knife
- hole punch
- twine, string or yarn

once you've gathered the materials it's time to make your suncatcher!

1. Use a utility knife to cut out one panel of a milk jug. This should be done by an adult.
2. With a black permanent marker, draw the Hispaniolan Spindalis onto your plastic piece. You can visit birdscaribbean.org to find a photo of this bird. You can also print out the image of the Hispaniolan Spindalis (below) bird and trace it by placing it under your plastic piece.
3. Add color to your bird with colored permanent markers. When finished, trace around the bird again with a black marker and add a small area to include a hole for hanging. Add details such as feathers and eye with a black marker as well.
4. Use scissors to cut out your bird and use a hole punch to punch a hole to hang.
5. Use a piece of twine, fishing line, or string to hang your Hispaniolan Spindalis suncatcher in a window that gets lots of sun.

You can use any of the Caribbean Endemic Birds of the Day to create other suncatchers! <https://www.birdscaribbean.org/caribbean-endemic-bird-festival/caribbean-endemic-birds/>
