
Ecological Studies

Analysis and Synthesis

Volume 252

Series Editors

David A. Wardle, Department of Ecology and Environmental Science, Umeå University, Umeå, Sweden

Josep G. Canadell, CSIRO Oceans and Atmosphere, Canberra, ACT, Australia

Sandra Díaz, National University of Córdoba, Córdoba, Argentina

Gerhard Heldmaier, University of Marburg, Marburg, Germany

Robert B. Jackson, Stanford University, Stanford, CA, USA

Delphis F. Levia, University of Delaware, Newark, DE, USA

Ernst-Detlef Schulze, Max Planck Institute for Biogeochemistry, Jena, Germany

Ulrich Sommer, GEOMAR | Helmholtz Centre for Ocean Research Kiel, Kiel, Germany

Ecological Studies is Springer's premier book series treating all aspects of ecology. These volumes, either authored or edited collections, appear several times each year. They are intended to analyze and synthesize our understanding of natural and managed ecosystems and their constituent organisms and resources at different scales from the biosphere to communities, populations, individual organisms and molecular interactions. Many volumes constitute case studies illustrating and synthesizing ecological principles for an intended audience of scientists, students, environmental managers and policy experts. Recent volumes address biodiversity, global change, landscape ecology, air pollution, ecosystem analysis, microbial ecology, ecophysiology and molecular ecology.

Valentí Rull

Origin and Evolution of Caribbean Mangroves

A Time-Continuum Ecological
Approach

Acknowledgments

The main ideas disclosed in this book were conceived during my stay (1990s) in the Venezuelan state oil company PDVSA as exploration biostratigrapher. PDVSA offered an inspiring work atmosphere and authorized the dissemination of findings from various studies, contributing to the formulation and arrangement of ideas that were further developed upon my return to Europe in 2002. While it is impossible to enumerate all the PDVSA personnel who contributed to and backed my research, notable paleontologists Estela Di Giacomo and María Antonieta Lorente merit particular acknowledgment. Close colleagues in the biostratigraphical team were Sailleth Cortez, Isbelia Durán, Armando Fasola, Francia Galea, Nancy Hambalek, Mercedes Hidalgo, Freddy Lazard, Diego Morillo, Rosina Pittelli, Oscar Quintero, Heriberto Rodríguez, Maibí Ruiz, Carlos de Sousa, Irene Truskowski, Miguel Velásquez, and Hender Villalobos. I would also like to acknowledge other less related but influencing partners, such as Juan Francisco Arminio, Fernando Cassani, Omar Colmenares, Jason Crux, Helena Gamero, Santosh Ghosh, Mari Carmen Gómez, Javier Helenes, Roger Higgs, Xiomara Márquez, Selena Mederos, Geoff Norris, Pieter Pestman, Claude Poumot, and Joachim Schiller. My Quaternary skills were obtained with the help of Maximiliano Bezada, Milagro Rinaldi, María Léa Salgado-Labouriau, and Carlos Schubert, from the Venezuelan Institute of Scientific Research (IVIC). I would also like to acknowledge some relevant scientists who influenced my paleoecological and evolutionary work in the Neotropics using palynology; these are Alan Graham, Jan Muller, and Thomas Van der Hammen. We stand on the shoulders of giants. No external funding was received specifically for assembling the materials, writing, and publishing this book, which was completed in the Spanish Council for Scientific Research (CSIC), while working in research projects about other topics. The thorough and detailed review of the manuscript by Ernesto Medina is greatly appreciated. As in my previous Springer books, I have received the constant support of the editorial team led by Lars Koerner, as well as the members of the production team, this time represented by Bibhuti Sharma.

Contents

1	Introduction	1
1.1	A Mangrove Story	1
1.2	Importance of Mangroves	6
1.3	The Time-Continuum Integrative Approach	9
1.4	Temporal Scope	14
1.5	Mangrove or Mangal?	16
1.6	Book Plan	18
	References	19
2	The Caribbean Mangroves Today	23
2.1	Main Environmental Traits	24
2.1.1	Caribbean Climates	25
2.1.2	Meteorological Hazards	26
2.1.3	Sea Level	27
2.1.4	Future Projections	27
2.2	Mangrove Plant Communities	28
2.2.1	Extent	28
2.2.2	Floristics	28
2.2.3	Biogeography	33
2.2.4	Ecological Hints	35
2.3	The CARMA Dataset	38
	Appendix 1	50
	References	53
3	Eocene Origin	61
3.1	Quantitative Fossil Pollen Records	65
3.1.1	Late Cretaceous	65
3.1.2	Paleocene	69
3.1.3	Eocene	72
3.2	The Oldest Caribbean Mangroves	78
3.2.1	Synthesis	79
	References	81

4	Oligocene Revolution	85
4.1	The Eocene–Oligocene Transition	88
4.1.1	Climatic and Sea-Level Changes	89
4.1.2	Biotic Responses	91
4.1.3	Mangroves and the EOT	93
4.2	The Caribbean Region During the EOT	96
4.2.1	Tectonic Setting	96
4.2.2	Paleogeography and Paleocurrents	96
4.2.3	Paleoclimates and Paleo-sea Levels	100
4.2.4	Biogeography	101
4.3	The EOT Caribbean Mangroves	103
4.3.1	Eocene	105
4.3.2	Post-Eocene	107
4.4	Synthesis	114
	References	116
5	Neogene Diversification	125
5.1	Neogene	126
5.2	Quaternary	129
5.3	Modern	130
5.4	Synthesis and Discussion	131
	References	134
6	The <i>Pelliciera</i> Taxon Cycle: A Time-Continuum	
	Integrative Synthesis	137
6.1	The Taxon Cycle	138
6.2	The Case of <i>Pelliciera</i>	140
6.3	Biogeographical Shifts	142
6.4	The <i>Pelliciera</i> Loop	145
6.5	Summary	150
	References	151
7	Quaternary Shifts and Anthropization	155
7.1	Climatic and Eustatic Changes	156
7.1.1	Pleistocene	156
7.1.2	Late Glacial–Holocene	158
7.2	Human Settlement	159
7.2.1	Late Pleistocene	159
7.2.2	Holocene	161
7.3	Mangrove Paleoecology	164
7.3.1	Modern Pollen Sedimentation	164
7.3.2	Paleoecological Records	167
7.3.3	Holocene	171
7.4	Synthesis	182
	References	184

8	Rise and Fall: Summary and Conservation Insights	191
8.1	Evolution	193
8.1.1	Eocene	193
8.1.2	Oligocene	193
8.1.3	Neogene	194
8.2	Paleoecology	194
8.2.1	Pleistocene	194
8.2.2	Holocene	195
8.3	Recent Decline and Future Projections	195
8.4	Conservation Insights.	197
8.4.1	Evolutionary Hints.	198
8.4.2	Paleoecological Contributions	198
8.4.3	Anthropogenic Pressure.	199
	References.	200
