

8 DE JUNIO

DÍA MUNDIAL DE LOS
Océanos

¿CÓMO PODEMOS AYUDAR A REDUCIR LA
CONTAMINACIÓN MARINA?

Opta por productos reutilizables en lugar de productos desechables.

Evita arrojar basura en las playas y asegúrate de recoger cualquier residuo que veas.

An underwater photograph of a sea turtle, likely a hawksbill, caught in a blue fishing net. The turtle is positioned in the upper right quadrant, with its head and front flippers visible. The net is a dense, tangled mesh of blue plastic, covering the lower half of the frame. The water is clear and blue, with light filtering through from the surface, creating a dappled effect. The overall scene conveys the impact of overfishing and bycatch on marine life.

*Infórmate sobre las especies marinas
en peligro de extinción y evita
consumir productos pesqueros
provenientes de esas especies.*

A collection of eco-friendly cleaning products is displayed in a light-colored wooden crate. The items include a black spray bottle with a white label that reads "ALL-PURPOSE CLEANER", a natural fiber brush, a white sponge, a wooden-handled brush, and several folded pieces of fabric in various colors and patterns. The background is a soft, textured wall, and the overall lighting is warm and natural.

Utiliza productos de limpieza y cuidado personal biodegradables y respetuosos con el medio ambiente.
